Dear Ms. Wei,

As a curious UX Designer with a background and passion for UX Research, I am keen to join Kira as a UX Researcher and help you understand your users. I currently work in cloud technologies so I have experience working with end-to-end iterative product development, complex problems and B2B products.

Having been the first dedicated UX hire at two companies (including as a UX Researcher), I have used a variety of methods (qualitative/quantitative, generative/evaluative), including a lot of interviews and usability testing. I have also had experience with the end-to-end research process from planning right through to documenting/socialising the findings.

I wish to work for Kira because of your innovation, particularly in the legal industry, which can be relatively conservative. I can see parallels between that and the work I do in cloud transformation. I am also interested in working more with machine learning. I am always striving to improve myself and Kira's culture of learning would empower me to become a better UX Researcher/practitioner.

If you wish to speak further, please do not hesitate to contact me. Thank you for your time.

Kind regards,  
Chris Nguyen
